

# Eolos Compact

Thin Wall Drip Line

Maximize Your Farm with Longer Run Lengths

# Maximize Your Farming

## Have you ever wondered why some drip lines can work for longer run lengths than others?

The maximum distance a drip line can function is dependent on a number of factors including the exponent (correlation between flow output and pressure) and the  $kd$  value (friction caused by each emitter in the drip line). The lower the exponent and the  $kd$  value, the further you can run your drip irrigation system while still maintaining a high standard of irrigation uniformity.

Eolos Compact's design minimizes friction loss through its small design, and its uniquely engineered flow path that minimizes the exponent. In other words, Eolos Compact allows you to achieve longer distances per row while still maintaining high uniformity.

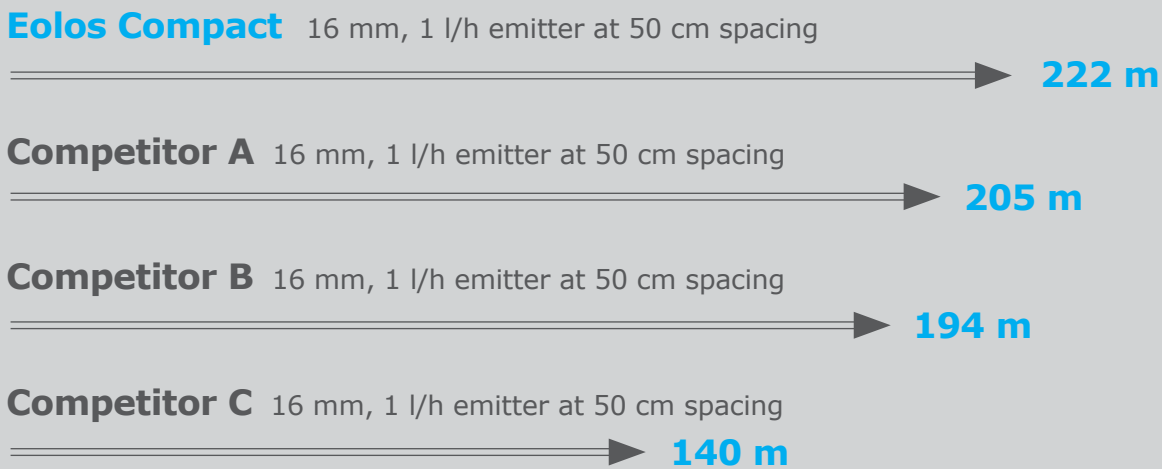

## Unique emitter design for high uniformity over longer distances

Water Flow

## Maximum: Run Length Comparison

Calculations based on 1 bar pressure, flat ground and 10% maximum flow variation.

## Maximize: Potential Benefits For Your Farm

- Achieve longer run lengths with a smaller diameter tube – Save on installation costs
- Irrigate longer rows for more efficient farming operations – Longer rows, fewer tractor turns
- Greater uniformity of irrigation over longer run lengths – More consistent crop yields

# Designed To Perform

**70% Smaller than competitive drippers** - Not only does a small emitter help reduce water friction in the drip line, a smaller emitter is easier to install with less risk of being caught on installation equipment.

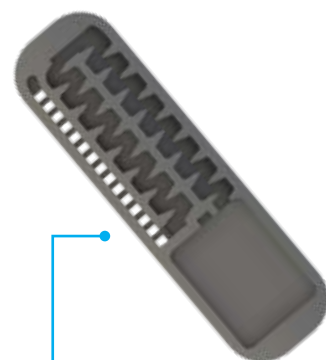

**Large cross section labyrinth** - With up to a 54% larger labyrinth than leading competitor products, the large labyrinth in every emitter helps Eolos Compact perform when other products clog.

**Trusted Worldwide** - From South America, to USA, to Europe, growers around the world trust Eolos Compact. Did you know, the amount of Eolos Compact sold each year would wrap around the world 42 times?

**Higher Maximum Operating Pressure** - Eolos Compact's durable construction allows for up to 20% higher published maximum operating pressure compared to competitive products.

**Printed White Stripes On Tube** - For easy emitter identification Eolos Compact features optional two white stripes to identify direction for correct installation.

**Flap Outlet Option** - Eolos Compact has a flat outlet option that helps prevent soil ingestion during system shut-down - a great advantage for buried applications.

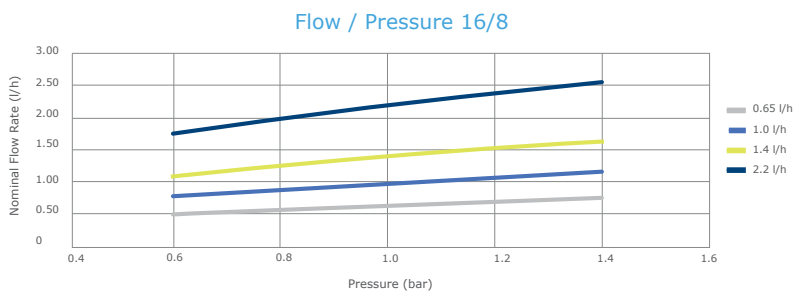

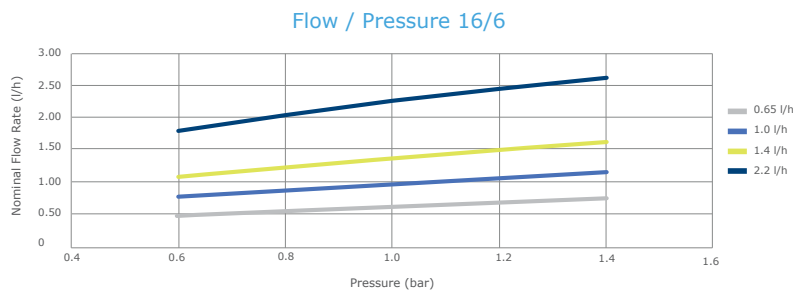

## Eolos Compact Technical Data

Nominal Ø	Wall Thickness		Internal Ø	Outside Ø	Nominal Flow Rate at 1.0 bar Pressure	Maximum Operating Pressure	Roll Length (according to emitter spacing)	Maximum Run Length (10% FV on Flat Ground) Spacing Between Emitters (cm)

## Flow Rate (l/h) vs. Pressure (bar)

## Maximize: Connectors

When it comes to drip line connectors there are two things that matter most – ease of installation and reliability. Rivulis Fast Ring Drip Line Connectors live up to their name – FAST! In-field they are quick to install with a large, easy-to-tighten nut that fixes effortlessly to your drip line.

Once they are installed, you can have the confidence that they will perform. Each Fast Ring Connector is designed for maximum adhesion. In addition, high quality UV resistant construction ensures that your connector will last season after season.

“By achieving longer run lengths using Eolos Compact, we significantly reduced our labor costs for installation in our corn crop”.
